CPU1 VDDC_33_S5

The schematic diagram illustrates the power supply circuit for CPU1 VDDC_33_S5. It features a DC-DC converter U71 (MPQ8633AGLE_Z) which converts input from P12V_CPU1_S5 through a series of capacitors (C2560-C2564, C1602-C1603, C3691, C1604) and resistors (R5728, R5726). The converter's output is filtered by a large capacitor (C3676, 100NF) and a resistor (R5731, 0). The output voltage is regulated by feedback components (R5732, R5733, R5735, R5734, R5736, R5833) and monitored via sense pins (P1_VSS_SENSE_B, VSEN_P1_VDD_33_S5_DP). The final output is connected to P1_VDDC_33_S5 through a network of capacitors (C2562-C2564, C1610-C1612, C3679, C3677, C3678, C3673, C3674, C3675, C3672) and resistors (R5729, R5730, R5704, R5705, R5727, R5723, R5724, R5725). A separate section shows the connection of P1_VDD_3V3_STBY_EN to P1_VDDC_33_S5 through a network of capacitors (C2395, C2396) and resistors (R5723, R5724, R5725).

CPU1 VDDC_33_S5

The schematic diagram illustrates the power supply circuit for CPU1 VDDC_33_S5. It features a DC-DC converter U71 (MPQ8633AGLE_Z) which converts input from P12V_CPU1_S5 through a series of capacitors (C2560-C2564) and resistors (R5728, R5726). The converter's output is filtered by C3676 and R5731 before reaching the load. Feedback components include C3677, R5732, R5735, and R5734. A sense resistor R5736 monitors the output voltage at VSEN_P1_VDD_33_S5_DP. Input control signals like P1_VDD_3V3_STBY_EN and P1_PWRGD_VDD_3V3_STBY_R are connected to the EN pin and feedback network. Output filtering is provided by C2562-C2564, C1610-C1612, and R5737. A secondary section shows a divider network with R5723, R5724, and C3671 connected to P3V3_STBY. Another part of the circuit includes two parallel 22UF capacitors (C2395, C2396) labeled 'PLACE SCOKET BOTTOM SIDE'. Component values range from 100NF to 100K.
